Precipitation probability					
60%	80%	80%	80%	80%	50%

Forecast for Friday 21 Oct 2022

Weather: Friday will be mainly cloudy with frequent but generally quick moving showers spreading up from the south, these often heavy with a risk of hail and lightning. Strong southerly winds and the chance of showers merging to give persistent rain at times will bring some poor conditions on the hills. Some brief bright intervals between showers but generally limited.

Chance of cloud-free hill tops above 600m: 30%.

Low cloud and visibility: Areas of cloud blowing across the range seeing bases down to 300-400m through much of the day, giving some very poor visibilities over the higher ground at times. Below the cloud, visibilities rather hazy, and often poor in showers.

Meteorologist's View

Frequent blustery and heavy showers will give some poor conditions on the range through the day, particularly if you get unlucky and see showers merge to give longer spells of rain with little chance of waterproofs drying and the risk that watercourses may become swollen making some paths dangerous to navigate if heavy rain persists for long enough. Strong gusty winds are also a hazard, particularly around showers and care should be taken on exposed ground.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
02:00 on Fri 21 Oct 2022	3.4mm	3.8mm	4mm

Forecast for Saturday 22 Oct 2022

Weather: Outbreaks of rain clearing later in the night. A drier and brighter day is then expected with sunny spells and isolated showers into the afternoon. Showers becoming more frequent and heavy late afternoon or evening with a chance of thunder. Very mild conditions but strong on exposed tops and ridges in the morning.

Maximum wind: South or Southwest 25mph with gusts to 35mph on the tops in the morning, easing to 15 to 20mph gusts 25mph during the afternoon.

Chance of cloud-free hill tops 600m: 60% overnight, becoming 80% in the morning, reducing to 30% in evening.

Low cloud and visibility: Patches of cloud above 400 or 500m overnight, largely clearing by morning. Generally good visibility during the day with cloud lifting above summits but poor at times in evening showers as cloud thickens.

Temperature: **Valleys:** 12 Celsius rising to 16 or 17 Celsius.
At 600m: Plus 10 rising to 12 Celsius.
Freezing level: Well above summits.
